- Extra wide near & intermediate
- Smaller but useful distance field
- Smooth transition between zones
- Available in all additions

Exclusively from **Norville**
MASTER LENS MAKERS

Bureau ^{HD}

Progressive Lenses Created for Administrators

Executives, doctors, lawyers, controllers, administrators.

Maintaining a correct and comfortable posture is essential to prevent neck and shoulders pain. Users of bifocals and standard progressives need to tilt the head about 20 degrees when working with computers.

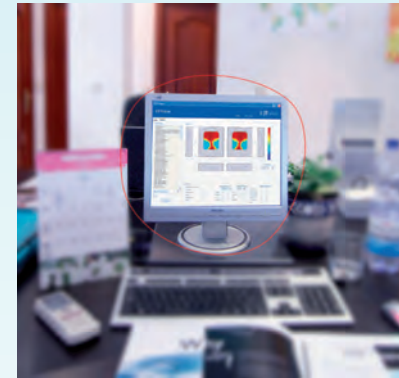

Neck & shoulders comfort

Working at a desk does not always entail an exclusive near vision need. Professionals require a more flexible solution for reading, working on their computers, attending meetings, presentations and so on. For these professionals, it is also essential they are wearing lenses that can give them a good view of intermediate-far vision.

Instant adaptation

Bureau is a soft design with a comfortable transition between distances. The focusing point is really easy to find, reducing the adaptation time. Mixing expanded near-intermediate fields with soft transitions the final result is a really comfortable lens with virtually instant adaptation.

Single focus lenses

One focus single vision lenses are just that. Far vision is impossible without taking your spectacles off. Even focusing on close and near distances is difficult for your eyes.

Bureau multi-focus lenses

Bureau is an innovative design which covers all the possible visual requirements that may arise when working in indoor environments, like offices, hospitals, shops, warehouses ...

Benefits

- Extra wide near & intermediate
- Smaller but useful distance field
- Smooth transition between zones
- Available in all additions
- High definition achieved due to Digital Ray-Path technology
- High precision and high personalisation
- Oblique astigmatism reduced
- Variable Inset

Not recommended for driving
